Marion County

Health Bulletin

The Mission of the Marion County Health Department is to improve the quality of life through preventing disease and preventative health

Bugs (including mosquitoes, ticks, and some flies) can spread diseases (including Zika, dengue, and Lyme disease), many of which cannot be prevented or treated with a vaccine or medicine. Reduce your risk by taking steps to prevent bug bites. See below for special instructions to protect babies, children, and pregnant women.

Use Insect Repellent

Use EPA-registered insect repellents* that contain at least 20% DEET (products include Cutter Backwoods and Off! Deep Woods) for protection against mosquitoes, ticks, and other bugs. Other repellents protect against mosquitoes but may not be effective against ticks or other bugs:

- Picaridin (also known as KBR 3023, Bayrepel, and icaridin); products include Cutter Advanced, Skin So Soft Bug Guard Plus, and Autan.
- Oil of lemon eucalyptus (OLE) or para-menthan-diol (PMD); products include Repel Lemon Eucalyptus.
- IR3535; products include Skin So Soft Bug Guard Plus Expedition and SkinSmart.

When using insect repellent, follow the instructions on the package and reapply as directed:

- ◆ In general, higher percentages of the

active ingredient provide longer-lasting protection. However, this increase in protection time maximizes at about 50% DEET.

- ◆ If you are also using sunscreen, apply it first, let it dry, and then apply repellent. Do not use products that contain both sunscreen and repellent.
- ◆ Do not spray repellent on the skin under clothing.

Traveling with Children

Follow instructions for applying repellent on children:

- ◆ Do not use insect repellents on babies younger than 2 months old.
- ◆ Do not use products containing OLE or PMD on children younger than 3 years old.
- ◆ Children should not touch repellent. Adults should apply it to their hands and gently spread it over the child's exposed skin.
- ◆ Do not apply repellent to children's hands because they tend to put their hands in their mouths.

- ◆ Keep repellent out of the reach of children.

For babies under 2 months old, protect them by draping mosquito netting over their carrier or car seat. Netting should have an elastic edge for a tight fit.

Pregnant Women

Some infections, including Zika, can spread from a pregnant woman to her fetus, so pregnant women should strictly follow steps to prevent mosquito bites while traveling. In the case of Zika, because infection in a pregnant woman is linked to serious birth defects and miscarriage, CDC recommends that pregnant women not travel to areas with Zika outbreaks.

When used as directed, EPA-registered insect repellents are safe and effective for pregnant and breastfeeding women.
